DISCLOSURES

NONE

LEARNING OBJECTIVES I

- Anatomical localisation of visual loss - **Afferent or Efferent Visual pathway**
- Delineating **Primary and Secondary Headache Syndromes** associated with visual loss
- Diagnosis and Management of various Headache syndromes

LEARNING OBJECTIVES II

- Important **Infectious causes of headache with visual loss** (Tubercular, Fungal, Parasitic infections, Measles etc)
- **Inflammatory, Vascular and Neoplastic** causes of Visual loss with headache
- Recognising clinical signs of **pseudotumor cerebri** and delineating primary from secondary causes
- Diagnosing and managing **sellar lesions** causing headache and vision loss

Key Messages

- Visual Loss is an emergency- 'Time is Vision'
- Systematic Neuroophthalmological examination – Saves Lives
- Understanding headache location, type , progression, severity may give vital clues to the diagnosis
