Talk Objectives

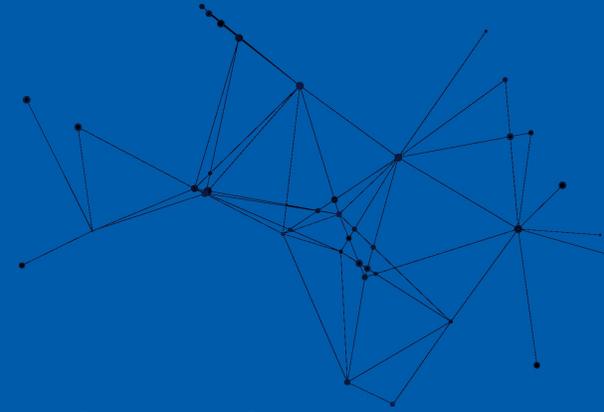

- Review symptomatic syndromic management focused on
 - Motor disability
 - Autonomic dysfunction
 - Multidisciplinary care
 - Social support
- Briefly Review Phase 2/3 PD experimental therapeutics for
 - MSA
 - PSP

Key Message

- Unfortunately , there are no disease modifying interventions for any of atypical parkinsonism syndromes
- Management should be focused on supportive care and quality of life
- Multidisciplinary care is essential for achieving the goals
- There is a growing pipeline of experimental therapeutics for MSA and PSP (though all Tau targeted MAB therapeutic studies have been negative so far)
