

# DEMENTIA IN ARAB WORLD

*Prof. Mustapha El Alaoui Faris*

Department of Neurology and Neuropsychology, Mohamed-V University,

Chair of the WFN RG on Neurology in Migrants.

Alzheimer's Center of Rabat. Morocco.

*Email: [mustapha.elalaouifaris@gmail.com](mailto:mustapha.elalaouifaris@gmail.com).*

# DECLARATION OF CONFLICT INTERESET

NONE

# LEARNING OBJECTIVES

- ❖ To Know that Prevalence of Dementia and their Risk Factors in Arab Countries is high.
- ❖ To know that the Number of Dementia will Increase with the Aging in this population.
- ❖ To Know how to Diagnose Dementia in Arab World.
- ❖ To Know Specificity of Neuropsychological Tests of Dementia in Arabic Language.
- ❖ To know that Prevention measures are Essential to Reduce the Number of Dementia and Cognitive Disorders in Arab Elderly
- ❖ To Know how to Manage Dementia in Arab Context.
- ❖ To Consider Dementia as a Public Health Priority.

# KEY MESSAGE

- ❖ IN ARAB COUNTRIES :
- ❖ Dementia and their Risk Factors have a high Prevalence.
- ❖ Incidence and Prevalence will Increase Dramatically with the Aging of the population.
- ❖ Diagnosis of Dementia is Challenging.
- ❖ Dementia and Cognitive Disorders are Underdiagnosed.
- ❖ Diagnosis of Dementia is usually made at an Advanced Stage.
- ❖ Neuropsychological Tests adapted in Arabic are Scarce.
- ❖ There are no specific policy for Prevention and Management of Dementia.
- ❖ It is Urgent for Arab Countries to Consider Dementia as a Public Health Priority.

# OUTLINE

- Dementia is a Public Health Priority.
- Epidemiology of Dementia and Risk Factors in Arab World.
- Diagnosis of Dementia.
- Neuropsychological Screening Tests.
- Prevention of Dementia.
- Management of Dementia.

# DEMENTIA A PUBLIC HEALTH PRIORITY 1

- Dementia is a severe clinical syndrome characterized by inevitably progressive deterioration in cognitive ability and capacity for depending living.
- The number of individuals living with dementia is increasing, negatively affecting families, communities, and health-care system around the world.
- The cost of dementia worldwide is \$ 818 Billion.
- The majority of care is provided by family care.
- Around two third of people with dementia worldwide live in LMIC.

*Prince M, Wimo A, Guerchet M et al. World Alzheimer Report 2015. ADI.*

*WHO. Dementia: a Public Health Priority; 2012*

# DEMENTIA A PUBLIC HEALTH PRIORITY 2

- In 2016, the global number of individuals who has Dementia was 43.8 million increase from 20.2 million in 1990.
- Women (27.2 Million) had more dementia than man (16.8 Million)
- Dementia was globally the fifth leading cause of death globally, accounting for 2.4 million deaths.

*Global, regional, and national burden of AD and other dementias. Lancet Neurol. 2019.*

# DEMENTIA A PUBLIC HEALTH PRIORITY 3

- The importance of dementia as an international issue was reinforced in 2012 when the WHO produced a report declaring dementia a 'Public Health Priority'.
- In 2017 the World Health Assembly endorsed a Global Action Plan on the Public Health response to dementia 2017-2025.
- The Global Plan aims to improve the lives of people with dementia, their families and the people who care for them.
- areas for action include: Reducing the risk of dementia; Diagnosis, Treatment and Care; Research and Innovative technologies; and Development of Supportive Environments for Caregivers
- .

*WHO. Dementia: a Public Health Priority*

UN General Assembly. Progress on the prevention and control of non-communicable diseases. 2017

# EPIDEMIOLOGY OF DEMENTIA IN ARAB WORLD 1

- Population of Arab World in 2014
- 366 million in Arab countries members of the Arab League.
- 15.7 million living in countries outside the Arab region.
  
- With a percentage of adults aged 60 years and older estimated around 7%, and the very rapid demographic aging in the Arab countries, this population will reach 19% by 2050.

*Hussein & Ismail. Ageing and Elderly Care in the Arab Region. Ageing Int. 2017*

# EPIDEMIOLOGY OF DEMENTIA IN ARAB WORLD 2

- One of those challenges that faces these countries is the expected rapid increase in the number of people suffering from dementia.
- This is significant because these countries lack the social and health care policies to respond to the new challenge that accompane this demographic change.

*Hussein & Ismail. Ageing and Elderly Care in the Arab Region. Ageing Int. 2017*

There are few Prevalence studies regarding dementia.

*El Tallawy et al. Prevalence of dementia in Al Kharga Distrect, New Valley Governorate Egypt. Neuroeoidemiology. (2012)*

# PREVALENCE OF DEMENTIA IN ARAB WORLD

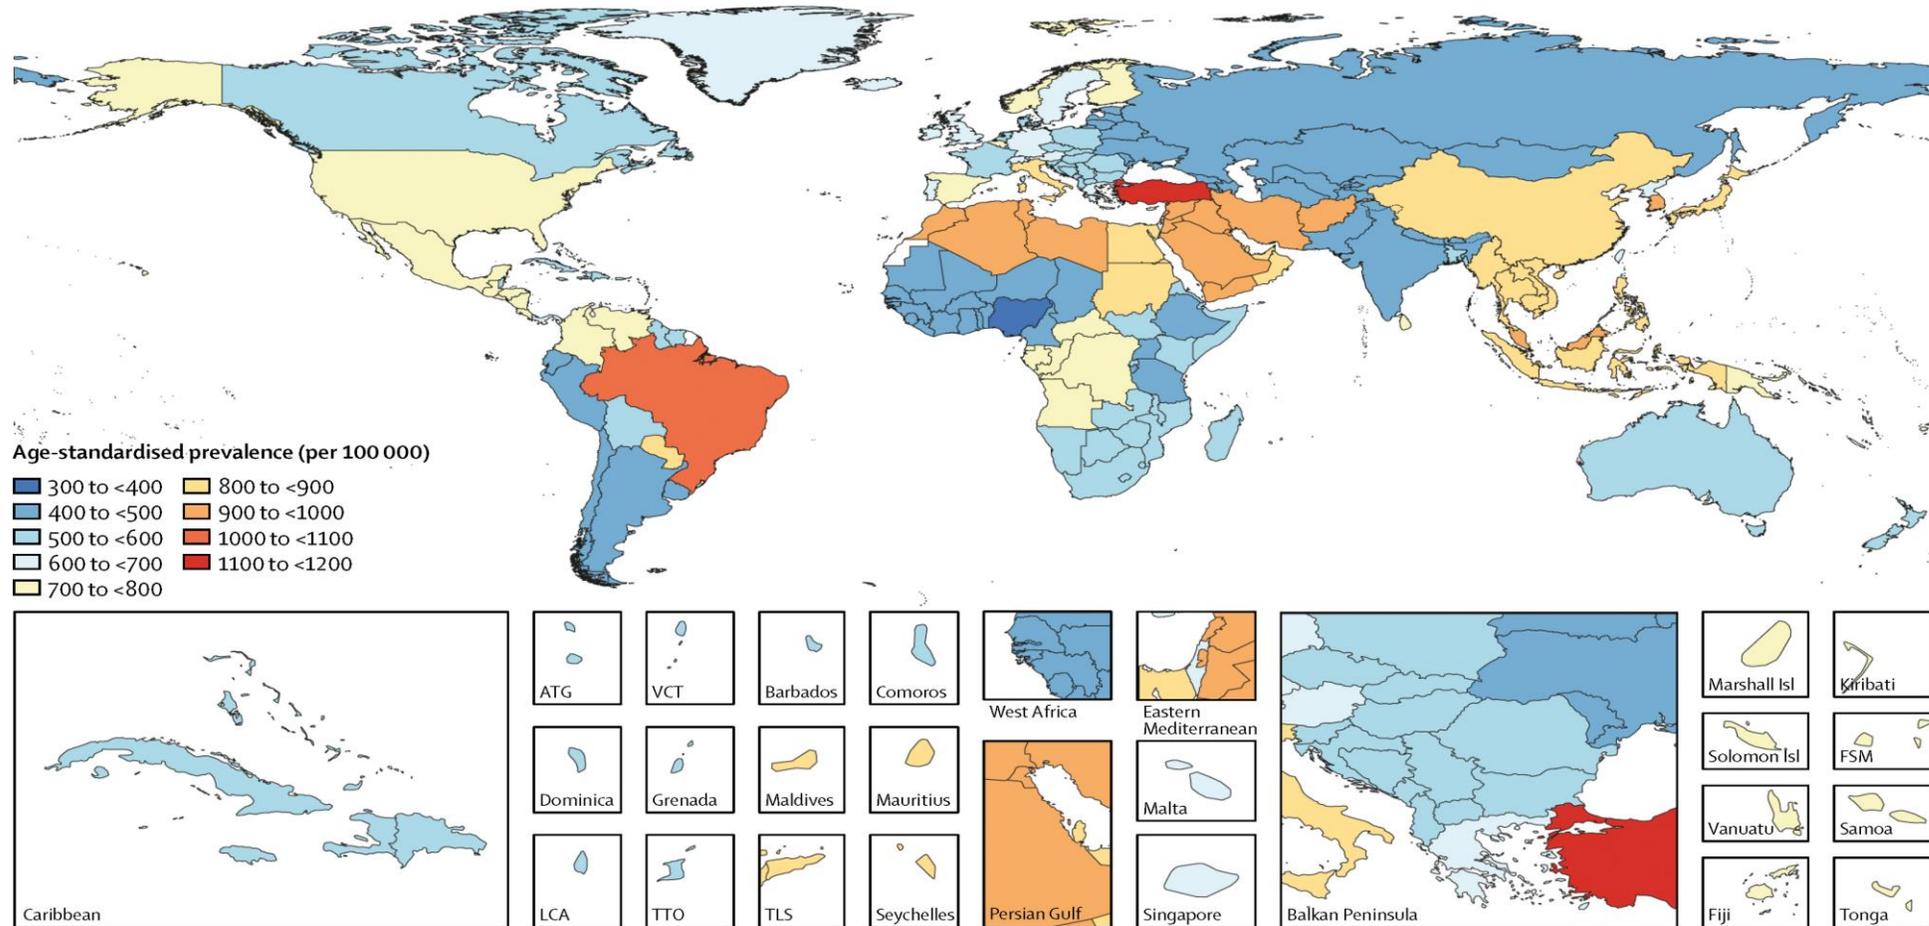

## ESTIMATION OF DEMENTIA PREVALENCE IN ARAB COUNTRIES IN 2016

- Age-standardized Prevalence : ----- 800 To 1000:100/ 000
- Number of Prevalent cases :-----1 540 478
- Number of deaths due to Dementia: -----65 774
- DALYs (disability Adjusted Life Years): -----936 981

*Global, regional, and national burden of AD and other dementias, 1990–2016. Lancet Neurol. 2019*

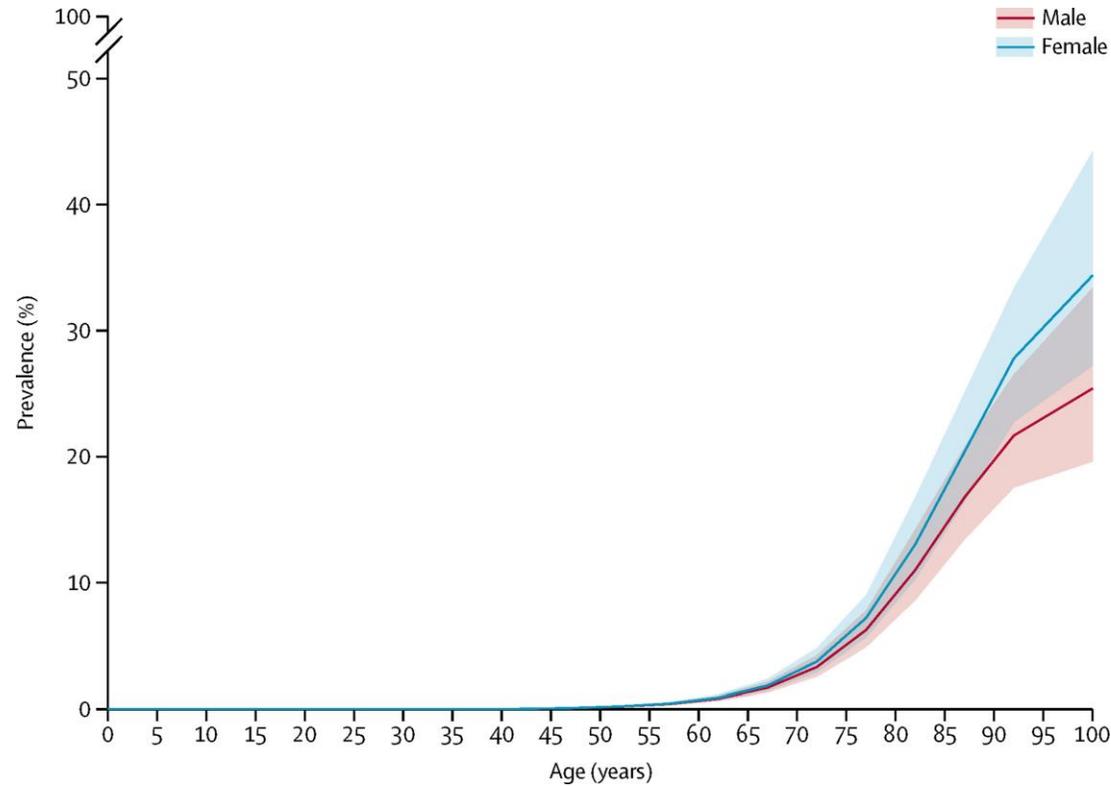

# PREVALENCE OF DEMENTIA

*Burden of AD and Dementia. Lancet Neurology, 2019*

# INCREASING PREVALENCE OF DEMENTIA WITH AGE

*Burden of AD and Dementia. Lancet Neurology, 2019*

# RISK FACTORS OF DEMENTIA

- Nine potentially modifiable Risk Factors :
- Less Childhood Education, Midlife Hearing Loss, Hypertension, and Obesity, and Laterlife Smoking, Depression, Physical Activity, Social Isolation, and Diabetes
- Account for 35% of worldwide dementia.
- Many people in Arab World cumulate numerous of these Risk Factors
- Initial targets for preventing dementia should to reduce these Risk Factors.

*Mukadam et al. Population attributable fractions for risk factors for dementia in LMIC. Lancet Glob Health (2019).*

*UN General Assembly. Progress on the prevention and control of NCD.2017*

# DIAGNOSIS OF DEMENTIA IN ARAB WORLD

- Having a sufficient number of geriatricians, neurologists and neuropsychologists is a priority to diagnose and manage of Dementia in Arab countries.
- It is of great importance to train GPs to screen for cognitive impairment in older adults
- The lack of neuropsychological diagnostic tools, Low education, and stigma make the diagnostic of dementia challenging.
- The perception of cognitive disorders in traditional societies can delay the diagnostic of dementia by several years.

*Hashmi : Dementia: an anthropological perspective. Int J Geriatr Psychiatry. 2009.*

- Dementia in elderly Arabs are frequently under-diagnosed and often diagnosed at an advanced stage.
- *Benabdeljlil , El Alaoui Faris et al. Dementia and AD. Experience of the Memory Center of Rabat. Eur. J. of Neurol.2015*

## EARLY-ONSET DEMENTIA: MEMORY CLINICS OF RABAT.

Variable	Value
Number of patients (n, %)	218
Male	112 (51.4%)
Female	106 (48.6%)
Age at presentation (Mean, SD)	52 (10.11)
Male	49 (9.88 )
Female	55 (9.47)
Time from onset to presentation (months) (Mean, SD)	28.5 (26.5)
Stage of dementia at presentation (Number, %)	
Mild	
Moderate	44 (20.2%)
Severe	133 (61%)
	27 (18.8%)

# NEUROPSYCHOLOGICAL TESTS IN ARAB WORLD 1

- ✓ The neuropsychological testing is an important part of the evaluation of suspected cases of Dementia. Cognitive Assessment Instruments are used for detection and assessing of cognitive impairment, diagnose of dementia type, and, follow-up of deterioration progress.
- ✓ There are very limited numbers of Arabic Validated neuropsychological diagnostic instruments for dementia.

*Azdad A, Benabdljlil, Al Zemmouri, El Alaoui Faris. Standardization and Validation of Montreal Cognitive Assessment (MoCA) in the Moroccan Population. Intern J of Brain and Cog Sciences.(2019)*

*Abou-Mrad et al. Sociolinguistic reflection on neuropsychological assessment: an insight into selected culturally adapted battery of Lebanese Arabic cognitive testing. Neuro Sci. 2015*

# NEUROPSYCHOLOGICAL TESTS IN ARABIC 2

The adaptation of neuropsychological tests in the Arab countries must take into account the linguistic specificity of Arabic:

- Arabic is a consonantal and derivational language

*Kouloughli. L'Arabe. QSJ, PUF, 2007*

- Arabic is written from right to left.

- The Arabic script is transparent and spelling is not used while learning to read Arabic.

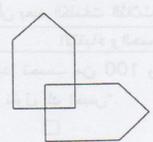

*El Alaoui Faris et al. Adaptation and Validation of the minimal state examination in Arabic. Rev Neurol.2003*

This makes a word spelling test in Arabic irrelevant, as in the minimal state examination ( to spell back the word WORLD).

*Folstein et al. Minimental state: A pratical method for grading the cognitive of patients for clinician. J Psyhyat Res.1975*

# ARABIC ADAPTATION OF MMSE

*El Alaoui Faris et al, 2003*

الفحص		التذكّر
التذكّر		التذكّر
* تتقدّر تقول لي هادوك الكلمات اللي طابيت منك تعقل عليهم؟		- نمّح 10 ثوان للإجابة. - نمّح نقطة واحدة لكل جواب صحيح. - لا نمّح بأي تساهل لأنه من المفروض أن يكون المريض قد تعرّف جيدا على الكلمات خلال اختبار التعلم.
المجموعة 1	المجموعة 2	المجموعة 3
19- شجرة <input type="checkbox"/>	كرة <input type="checkbox"/>	كرسي <input type="checkbox"/>
20- باب <input type="checkbox"/>	فأس <input type="checkbox"/>	وردة <input type="checkbox"/>
21- خاتم <input type="checkbox"/>	عنب <input type="checkbox"/>	قط <input type="checkbox"/>
اللغة		اللغة
22- نقدّم قلما قائلين " اسجبة هاددا "		- نحسب نقطة واحدة لكل جواب صحيح ونمنح 10 ثوان لكل إجابة.
23- نقدّم ساعة قائلين " اسجبة هادجج "		• يجب أن نغم قلم رصاص وساعة. الأجابة المطلوبة هي : قلم- ساعة.
24- اسمع مزيان وعاود مورايا " ما فيها لا إلا ولا حتجج "		• يجب أن نقول الجملة بصوت مرتفع وبوضوح أمام المريض، ولا نحسب نقطة واحدة إلا إذا كانت الإعادة سليمة وكاملة.
25- نضع ورقة على المكتب، نريها للمريض ونقول له : "سمع مزيان ودير اللي غادي نطلب منك " - "خط الوراق بيدك اليمينية "		• نحسب نقطة واحدة لكل جواب صحيح. إذا توقف المريض وسأل ماذا يجب أن يفعل، لا نعيد التعليم بل نقول : "دير داك الشئ اللي طلبت منك".
26- "اطوها على جوج "		• نمّح نقطة واحدة إذا أغمض المريض عينيه.
27- "وأرمها على الأرض "		• نحسب نقطة واحدة إذا كانت الجملة مفيدة ولا نأخذ أخطاء الإملاء والتعبير بعين الاعتبار. نمّح 30 ثانية للإجابة.
28- نقدّم للمريض ورقة كتبت عليها بأحرف بارزة : "أغمض عينيك " ونقول : " دير ديك الشجج اللجج مكتوب ف الوراق "		
29- نقدّم للمريض ورقة وقلما قائلين : " كتب لجج جملة مفيدة "		
النسخ		النسخ
30- نقدّم للمريض الورقة التي تحتوي على الرسم : 		- نمّح نقطة واحدة إذا كانت كل الزوايا واضحة وتقاطع الشكلان على جهتين مختلفتين. نسّح للمريض بعدة محاولات ونمنحه دقيقة واحدة.
الحاصل النهائي ..... / 30		

MINIMENTAL STATE		الفحص الذهني المختصر
المستوى الثقافي :		اسم المريض :
تاريخ الفحص :		اسم الفاحص :
الفحص		تعليمات الفحص والترقيم
التوجه		التوجه
* "غادي نطرح عليك بعض الأسئلة باش نختابر الذاكرة ديالك. بعض الأسئلة سهلة وبعضها صعبة شوية. حاول تجاوب عليها مزيان".		- لا تقبل إلا الإجابة الصحيحة بالنسبة لك الأسئلة الآتية ومع ذلك نسّح للمريض بتصحيح الجواب الخاص بفصول السنة أو الطابق قائلين : "واش انت ماكد"
تقدّر تقول لـجج التاريخ ديال اليوم ؟		- إذا أجري الفحص في العيادة نطلب اسم الطبيب (وذلك بالنسبة للسؤال السادس).
* إذا كان الجواب خاطئا أو غير تام نطرح الأسئلة الآتية :		- نمّح نقطة واحدة لكل جواب صحيح.
1- شمن عام احنا ؟		إذا لم يجب المريض أو كان الجواب خاطئا نعطي صفر نقطة.
2- شمن فصل ؟		- نمّح 10 ثوان للإجابة عن كل سؤال.
3- شمن شهر ؟		
4- شحال اليوم ف الشهر ؟		
5- سمية اليوم ؟		
* "أبا غادي نطرح عليك شي أسئلة عندها علاقة بالبلاضة اللي حنا فيها".		
6- سمية السبيطار اللجج احنا فيه ؟		
7- فينا مدينة كايين ؟		
8- اشمن طبقة ؟		
9- أسمية الزنقة (الشارع) فين كنتسكن ؟		
10- أسمية الحجج ؟		
التعلم		التعلم
* "عاجج نقول لك 3 ديال الكلمات، عاوضهم مورايا وحاول تعقل عليهم لأنجج عاجج نطلب منك تقولهم لـجج من بعد".		- نذكر الكلمات الثلاث بوضوح : كل كلمة في ثانية. - نمّح 20 ثانية للإجابة. - نحسب نقطة واحدة لكل كلمة أعيدت صحيحة في المحاولة الأولى.
المجموعة 1	المجموعة 2	المجموعة 3
11- شجرة <input type="checkbox"/>	كرة <input type="checkbox"/>	كرسي <input type="checkbox"/>
12- باب <input type="checkbox"/>	فأس <input type="checkbox"/>	وردة <input type="checkbox"/>
13- خاتم <input type="checkbox"/>	عنب <input type="checkbox"/>	قط <input type="checkbox"/>
* استطاع أن يعيد الكلمات الثلاث في المحاولة		- إذا لم يستطع المريض إعادة جميع الكلمات في المحاولة الأولى نستمر في تكرار المحاولة حتى يتمكن من ذلك. لا نستطيع تقييم التذكّر إذا لم يوقف المريض في إعادة جميع الكلمات. - نتوقف بعد 6 محاولات. - نستعمل المجموعة الأولى من الكلمات في أول اختبار يخضع له المريض ونحتفظ بالمجموعة الثانية والثالثة عند إعادة الاختبار مرة أخرى.
الانتباه والحساب		الانتباه والحساب
* "عادي تبدأ تحسب من 100 وتقص 7 ف كل مرة، استمر حتى نقول لك احبس".		- يمكن أن نساعد المريض قائلين : "100-7 شحال كنتساوي... كمل". - نتوقف بعد 5 عمليات طرح ونمنح نقطة واحدة لكل عملية صحيحة أي كلما طرح المريض 7 من العدد السابق كيفما كان وأعطى الجواب الصحيح مثلا : 100-7=92 نمّح 0 نقطة ؛ 92-7=85 نمّح نقطة واحدة.
93 - 14 <input type="checkbox"/>	86 - 15 <input type="checkbox"/>	79 - 16 <input type="checkbox"/>
72 - 17 <input type="checkbox"/>	65 - 18 <input type="checkbox"/>	
* استطاع أن يعيد الكلمات الثلاث في المحاولة		- إذا سأل المريض خلال الاختبار كم يجب أن يطرح، لا يسمح بإعادة التعليم نقول فقط : "كمل بحال اللي درتي من قبل". - إذا لم يتمكن المريض من إنجاز الخمس عمليات، يجب أن نطلب منه أن يتجهى كلمة مفتاح بالمقلوب. - تقدّر تقول لي بالمقلوب الحروف اللي كتكون ف كلمة مفتاح، بد بالحرف الأخير". (إذا تعرض المريض لصعوبات كبيرة في الانتباه والحساب، يجب أن نطلب منه أن يتجهى كلمة مفتاح مبتدئا بأول حرف قيل أن نطلب منه أن يتجهها بالمقلوب حتى يكون وثقا أكثر". بالنسبة لهذا الاختبار نحسب عدد الحروف التي تهجاها المريض في الترتيب : ح ا ت ف م = 2 نقط ولا تأخذ بعين الاعتبار في الحاصل النهائي.

# NEUROPSYCHOLOGICAL TESTS IN ARABIC 3

- From a socio-linguistic point of view, Arab speakers are in a situation of diglossia, this means that they use two linguistic codes:
- a dialectal (colloquial) language, particular to each country, used in intimacy and domesticity , and it does not have a specific script.
- and the Modern Arabic Standard (SMA), Arabic language common to all Arab countries.
- only the SMA a written version.
- It is used in all Arab World in Education, Administration, Television, Newspapers, Literature...

*Fergusson. Diglossia. WORD.1059.*

*Holes . Modern Arabic: Structures, functions, and varieties. 2004*

# NEUROPSYCHOLOGICAL TESTS IN ARABIC 4

- Diglossia have several implications for adaptation and development of neuropsychological tests in Arabic.
- All the oral part of a test and the instructions for the patient will be in dialectal Arabic, which is specific to each country.
- the written part of the test will necessarily be in Standard Modern Arabic. that

# NEUROPSYCHOLOGICAL TESTS IN ARABIC 5

- Under these conditions, a test adapted in one Arab country, must undergo some change before it can be used in another country.
- In particular, the oral part of the test and instructions for patients, must be modified according to the dialect of the second country concerned.
- Before using this version of the test, it should be standardized and validated in the target population.

*El Alaoui Faris et al. Adaptation and Validation of the minimal state examination in Arabic. Rev Neurol.2003*

# COGNITIVE SCREENING IN ILLETERATE

- The number of illiterate or semi-literate people remains high in some Arab countries.
- Classical neuropsychological tests are not relevant in these people.
- For example, illiterate persons can lose from 5 to 15 points in the MMSE without having any cognitive disorders.

*El Alaoui Faris M. (2003). Adaptation and Validation of the minimal state examination in Arabic. Rev Neurol. 159, 149*

- Specific neuropsychological tests should be developed to assess cognitive impairment in low educated persons.

*Ardila al. Illiteracy: The Neuropsychology of Cognition without Reading, Arch of Clin Neuropsychology. (2010)*

*Oumellal, El Alaoui Faris, Benabdeljil et al. Population Normative Data of the Moroccan Arabic Version of Three Components of the 10/66 Dementia RG Cognitive; with Moroccan Illiterate and Semi-Illiterate Subjects. Advanc in AD. 2019*

## MMSE STANDARDS BY EDUCATION LEVEL IN MOROCCAN POPULATION *(El Alaoui Faris et al, 2003)*

Education (years)	Average (MMSE)	SD
0-5 years	20,70	4,69
6-9 years	26,58	2,76
10 years and over	28,10	1,93

# PREVENTION OF DEMENTIA IN ARAB WORLD

- Several studies show that the improving of education and living conditions of the population, and the prevention and treatment of vascular and chronic diseases, can reduce the prevalence rate of dementia.
- This evidence suggests also that an optimum health early in life might benefit cognitive health late in life

*Wu et al. The changing prevalence and incidence of dementia over time - current evidence. Nat Rev Neurol. 2017*

*Livingston et al. Dementia Prevention, Intervention, and Care. Lancet. 2017*

A planned policy against dementia must act on different levels: at the primary level by tackling risk factors, at the secondary level by early detection and diagnosis of cognitive disorders and at tertiary level by treatment of dementia and caregiver support.

*UN General Assembly. Progress on the prevention and control of non-communicable diseases. 2017*

# MANAGEMENT

- Raising awareness within Arab communities about dementia is an important first step in improving access of people to health services.
- Developing socially and culturally appropriate structures for the care of patients with dementia at different stages of illness should be a priority for health managers in each country.
- Several studies have shown that cognitive stimulation at the stage of MCI and at the beginning of Alzheimer's disease, can slow down the course of the disease and improve the quality of life of patients.
